

## Medior Backend Software Developer

**Location:** The Hague (NL)

**Full/Part-time:** Full-time

*Are you passionate in realizing innovative data driven solutions that fit the client's needs, technically skilled, an outstanding backend software engineer, disciplined worker and familiar with CI/CD software development and micro services platforms? Then you might be the latest addition to our ambitious team as Junior Backend Software Developer.*

### Your job

As a software backend developer it is your responsibility to successfully realize innovative data storage & analytics software and CI/CD projects within our software development team. This means amongst other things:

- Translating client requirements into working software code for data systems and environments;
- Devising, developing and achieving innovations in the area of edge to cloud data processing and storage tools and integrations for large international clients;
- Co-developing (innovative) technical solutions with colleagues and clients in the area of edge to cloud real time data systems, IT network systems and machine learning for remote operations;
- Reviewing code developed by your colleagues and coaching them to create better code;
- Developing, testing and maintaining software code.

### Your profile

For a permanent addition to our ambitious and close-knit team, we are looking for someone who wants to work with us on growing and developing our company.

You have strong strategic and conceptual skills and proven experience backend software development projects in all project stages, from development, test up to production software projects within the real time data Industry.

The following suits you:

- You have the courage to take our customers by the hand to find realistic solutions that make their operations better;
- You work independently and in a structured way; you dare to make mistakes and to learn from them; you coach your colleagues and let them learn from your mistakes as well;
- You have knowledge on analytics products and platforms; knowledge in TimescaleDB system is a strong plus point; if you are not an expert, you are planning to become one;
- You have at least 3 year of proven experience in and knowledge of Python and/or SQL; NoSQL is a plus;
- Experiences with C++, Dotnet Core, PostgreSQL, Timescale DB, Grafana and writing APIs using Swagger is a plus;

- Your knowledge and experience with Azure DevOps or any other CI/CD pipeline tools is a plus
- You have experience with any of the following architecture components: Docker, Kubernetes, Helm, YAML, Confluent and Azure Cloud platform or the willingness to learn
- You have affinity with Angular, Java Script and Cloud platforms; experience in Linux is a plus;
- You have a minimum of Bachelor's degree from a technical study with and at least 7 year of experience in software development or a Master's degree and at least 3 years of experience in software development.

### **Our offer**

Helin offers a dynamic and challenging full-time job within an innovative company operating in global industries. In addition, we offer you a competitive salary, professional development opportunities, travel allowance, pension allowance, training courses and working in a global sector with traveling opportunities. As a family company we always strive for a permanent partnership and long term relations.

### **About Helin**

Helin contributes to improving the efficiency and safety of remote operations. We excel in doing that as we enjoy solving complex technical puzzles. We combine our analytical way of problem solving with empathy for all the stakeholders and business needs. Our expertise in advanced analytics and edge computing is a tool to develop innovative edge analytics solutions.

Helin has a strong focus on 24/7 and/or remote operations. These include industries like offshore wind & marine, equipment rental, agriculture, process industry. Their operations impose high-end requirements to the performance of analytics and monitoring. Our systems are deployed world-wide and often at remote locations. We combine domain knowledge, clever programming and thoughtful deployment throughout the whole process.

We have backgrounds in aerospace engineering, energy industry, renewables and the academic world. This makes us curious to understand exactly how things work and how they can be improved. We love to propose better alternatives in a constructive way. This requires empathy about existing bottlenecks, curiosity about domain knowledge, analytical problem solving skills and expertise in data analytics and software development. And some politics. If these aspects excite you, we'd love to talk to you!

### **Interested?**

Do you recognize yourself in this job description and do you get excited about its challenges? Then, you are the Data Engineer we are looking for! Please respond directly, either in English or in Dutch.
